

# Package ‘MuChPoint’

September 8, 2025

**Type** Package

**Title** Multiple Change Point

**Version** 0.6.4

**Maintainer** Vincent Brault <vincent.brault@univ-grenoble-alpes.fr>

**Description** Nonparametric approach to estimate the location of block boundaries (change-points) of non-overlapping blocks in a random symmetric matrix which consists of random variables whose distribution changes from block to block.

BRAULT Vincent, OUADAH Sarah, SANSONNET Laure and LEVY-LEDUC Celine (2017) <[doi:10.1016/j.jmva.2017.12.005](https://doi.org/10.1016/j.jmva.2017.12.005)>.

**Imports** Matrix, capushe, shiny, utils, methods, Rcpp, grDevices, graphics

**Collate** MuChPoint\_Class.R RcppExports.R MuChPoint.R

**URL** <https://github.com/Lionning/MuChPoint>

**BugReports** <https://github.com/Lionning/MuChPoint/issues>

**License** GPL-2

**Encoding** UTF-8

**RoxygenNote** 7.3.3

**LinkingTo** Rcpp

**NeedsCompilation** yes

**Author** Vincent Brault [cre, aut] (ORCID: <<https://orcid.org/0000-0002-3629-3429>>),

|---------------|-----------------------------------------------------|
| Compute_Cn1n2 | <i>Compute the Delta of the dynamic programming</i> |
|---------------|-----------------------------------------------------|

---

### Description

Compute the Delta of the dynamic programming in [Rcpp](#)

### Usage

```
Compute_Cn1n2(x)
```

### Arguments

|   |                    |
|---|--------------------|
| x | the matrix of rank |
|---|--------------------|

---

|           |                                    |
|-----------|------------------------------------|
| MuChPoint | <i>MuChPoint fitting procedure</i> |
|-----------|------------------------------------|

---

### Description

Produce a block-wise estimation of a symmetric matrix.

### Usage

```
MuChPoint(Y, Lmax = nrow(Y)/2, N = NULL, cores = 1, verbose = TRUE)
```

### Arguments

|         |                                                                                                                                          |
|---------|------------------------------------------------------------------------------------------------------------------------------------------|
| Y       | symmetric matrix of observations.                                                                                                        |
| Lmax    | a positive integer less than number of columns (and number of rows). By default, $\text{nrow}(Y)/2$ .                                    |
| N       | a positive integer vector less than number of columns (and number of rows). N is used when the break-points are known. By default, NULL. |
| cores   | a positive integer giving the number of cores used. If you use windows, the parallelization is impossible. By default, 1.                |
| verbose | logical. To display the progression bars. By default TRUE.                                                                               |

## References

Article: BRAULT V., OUADAH S., SANSONNET L. and LEVY-LEDUC C. Nonparametric homogeneity tests and multiple change-point estimation for analyzing large Hi-C data matrices. Journal of Multivariate Analysis, 2017

## Examples

```
require(MuChPoint)
require(Matrix)
mu=c(rep(c(rep(1,25),rep(0,25)),3))%*%t(rep(c(rep(0,25),rep(1,25)),3))
Y=matrix(rnorm(150^2,0,2),150)+mu+t(mu)
Y=as.matrix(forceSymmetric(Y))
res=MuChPoint(Y)
plot(res,Y,L=5,shiny=FALSE)
plot(res,Y,L=1:10,shiny=FALSE,ask=FALSE)
```

---

|                 |                          |
|-----------------|--------------------------|
| MuChPoint-class | <i>Class "MuChPoint"</i> |
|-----------------|--------------------------|

---

## Description

Class of object returned by the MuChPoint function.

## Usage

```
## S4 method for signature 'MuChPoint'
show(object)
```

## Arguments

object                    an object with class MuChPoint

## Slots

S a vector object of type numeric, giving the values of the statistics  $S_n(n_1, \dots, n_L)$  following the number L.

N a numeric vector with the position of the different break-points.

bt an inferior triangular matrix containing the positions of break-points following the number of break-points (in rows).

---

`plot, MuChPoint-method` *Produce a plot of two-dimensional segmentation of a MuChPoint fit.*

---

**Description**

Produce a plot of two-dimensional segmentation of a MuChPoint fit.

**Usage**

```
## S4 method for signature 'MuChPoint'
plot(x, y, shiny = TRUE, col = "Color", L = NULL, ask = TRUE)
```

**Arguments**

|                    |                                                                                                                          |
|--------------------|--------------------------------------------------------------------------------------------------------------------------|
| <code>x</code>     | an object of class <code>MuChPoint</code> .                                                                              |
| <code>y</code>     | used for S4 compatibility represented the matrix (typically, the matrix used in the program <a href="#">MuChPoint</a> ). |
| <code>shiny</code> | for a representation with a shiny application.                                                                           |
| <code>col</code>   | for the colors of the representations.                                                                                   |
| <code>L</code>     | the summarized matrix with <code>L</code> break-points ( <code>L</code> can be a vector).                                |
| <code>ask</code>   | If <code>TRUE</code> , to hit will be necessary to see next plot.                                                        |

**Examples**

```
require(MuChPoint)
require(Matrix)
mu=c(rep(c(rep(1,25),rep(0,25)),3))%*%t(rep(c(rep(0,25),rep(1,25)),3))
Y=matrix(rnorm(150^2,0,2),150)+mu+t(mu)
Y=as.matrix(forceSymmetric(Y))
res=MuChPoint(Y)
plot(res,Y,L=5,shiny=FALSE)
plot(res,Y,L=1:10,shiny=FALSE,ask=FALSE)
```

---

print,MuChPoint-method

*Print for the class of object returned by the MuChPoint function.*

---

### Description

Print for the class of object returned by the MuChPoint function.

### Usage

```
## S4 method for signature 'MuChPoint'  
print(x, N = NULL)
```

### Arguments

|   |                                                                             |
|---|-----------------------------------------------------------------------------|
| x | an object with class MuChPoint                                              |
| N | a numeric between 1 and length(x@N) for the number of break-points desired. |

---

summary,MuChPoint-method

*Summary of a MuChPoint object.*

---

### Description

Summary of a MuChPoint object.

### Usage

```
## S4 method for signature 'MuChPoint'  
summary(object)
```

### Arguments

|        |                               |
|--------|-------------------------------|
| object | an object of class MuChPoint. |
|--------|-------------------------------|
